

Air Seal Raised Floor Grommets

Maintaining adequate under floor static pressure is one of the most important aspects for successful cooling of the data center. The Air-Brush floor grommet is intended for new installations to seal floor cut outs before the installation of power or communication cables. “Bypass air” is conditioned air that does not reach the intake of IT equipment. The elimination or reduction of “bypass air” is essential to the successful operation of the cooling dynamics of the data center. Air-Brush is the economical choice in raised floor grommets.

Advantages

- Promotes Hot Aisle/Cold Aisle best practices
- Increases overall room cooling capacity
- Increases the under floor static pressure
- Improves airflow where it is needed

Specifications

Face size: 201mm x 265mm x 30mm
Cutout size: 160mm x 222mm
Fire retardant ABS Polycarbonate
Overlapping bristles for a better seal
