

Benefits:

- Out-of-the-box capability and quick installation of the most robust DCIM solution in the market
- Hands-on training concurrent with installation leading to high success rate.
- Scalable, flexible and reduces costs associated with on-site installation.
- Comprehensive event management and alarm notification to ensure business-critical continuity.
- Saves time through the creation of user-defined rules regarding email notifications.
- Highlights issues that need urgent and immediate attention and meets the needs of executive management.
- Offers views of current and historical efficiency metrics – PUE and DCIE.
- Shows exactly where inefficiencies are occurring within devices and subsystems.

The value and benefits of a Data Center Infrastructure Management (DCIM) solution are clear and now so is the ability to get started. The *Trellis™* Platform Express Edition is a quick and easy way to take the first steps towards implementing a real-time, holistic DCIM solution quickly and efficiently. Furthermore, the *Trellis™* Platform Express Edition scales and flexes as data center needs grow, and is conveniently packaged, and quick to deploy. It provides every organization an affordable entry into DCIM with the “most comprehensive”¹ solution in the market today. This version of the *Trellis™* platform is easy to configure and maintain with the ability to upgrade-as-you-go.

The software is built on a real-time platform that is modular and scales as business needs grow.

- Purpose-built software platform that is modular, scalable, flexible and efficient
- Holistic system design – hardware and software engineered together which enables ease of deployment, scalability, faster realization of ROI and lower TCO
- System intelligence – complex event processing and contextual presentation of information in a scalable, efficient design across the platform
- Real-time data – collection of IT and facility data via native communication with the devices almost instantaneously: complex event processing capability

The *Trellis™* Platform Express Edition is a bundled offering of existing functionality that is pre-configured to customer requirements and will provide new and existing customers the ability to choose from two offerings; 1) *Trellis™* Facility Manager Express and 2) *Trellis™* Inventory Manager Express.

The *Trellis™* Facility Manager Express is a bundled package of the current *Trellis™* Site Manager, Avocent® Universal Management Gateway appliance and Avocent® Professional Services. There are two options for the *Trellis™* Facility Manager Express: one, for tracking and monitoring up to 10 floor-mounted devices (FMDs) and the other, for up to 25 FMDs.

The *Trellis™* Inventory Manager Express is a bundled package of the current *Trellis™* Inventory Manager, Professional Services, and comes with a host server.

The Trellis™ Platform Express Edition gives you:

- Simplified ordering and packaging of functionality
- Faster deployment
- Scale and performance
- A single platform with a common interface to all system components
- Real-time data showing detailed device status
- Distributed architecture that enhances data collection and processing capabilities
- Extensive monitoring and alarm notification
